MA8353 TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS L T P C 4 0 0 4 OBJECTIVES : • To introduce the basic concepts of PDE for solving standard partial differential equations. • To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems. • To acquaint the student with Fourier series techniques in solving heat flow problems used in various situations. • To acquaint the student with Fourier transform techniques used in wide variety of situations. • To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems. UNIT I PARTIAL DIFFERENTIAL EQUATIONS 12 Formation of partial differential equations – Singular integrals – Solutions of standard types of first order partial differential equations - Lagrange's linear equation - Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types. UNIT II FOURIER SERIES 12 Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis. UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS 12 Classification of PDE – Method of separation of variables - Fourier Series Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction. UNIT IV FOURIER TRANSFORMS 12 Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity. UNIT V Z - TRANSFORMS AND DIFFERENCE EQUATIONS 12 Z-transforms - Elementary properties – Inverse Z-transform (using partial fraction and residues) – Initial and final value theorems - Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform. TOTAL : 60 PERIODS OUTCOMES : Upon successful completion of the course, students should be able to: • Understand how to solve the given standard partial differential equations. • Solve differential equations using Fourier series analysis which plays a vital role in engineering applications. • Appreciate the physical significance of Fourier series techniques in solving one and two dimensional heat flow problems and one dimensional wave equations. • Understand the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering. • Use the effective mathematical tools for the solutions of partial differential equations by using Z transform techniques for discrete time systems.
